DETAILED ACTION

Response to Amendment

1. Acknowledgement is made of the amendment/response made 4-24-08.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 15-25 is rejected under 35 U.S.C. 102(b) as being anticipated by Fishcer et al (US 2003/0074961).

Regarding claims 15-25 Fischer et al teaches means for measuring the pressure of the gas contained in the tire (abstract); means/memory 32 for collecting pressure measurement data; means/microprocessor for calculating [step 36] the change in pressure between two instants of measurement data collection; and means/circuit for clocking the time of

the measurement data collection [0023] and for calculating the change in pressure between clocked instants of collection [0018]; means for temperature-compensating the pressure measurement 36.

Allowable Subject Matter

3. Claims 9-14 are allowed.

The following is an examiner's statement of reasons for allowance:

The cited prior art does not disclose nor suggest clocking the collection of the pressure measurement data and computing the intervals separating the clocked instants of collection to deduct therefrom the corresponding pressure deviations between the clocked instants of collection.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

4. Applicant's arguments filed 4-24 regarding claims 15-25 have been fully considered but they are not persuasive.

In response to the applicants argument related to claim 20 and Fischer et al is lacking "microprocessor for calculating the change in pressure between two instants of measurement data collection and for calculating the change in pressure between clocked instants of collection", is not persuasive. Since Fischer et al at least teaches a micro-processing structure, a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim.

In response to the applicants arguments that Fischer et al does not teach a means for temperature compensating the pressure measurement is not persuasive. That is Fischer et al clear discuss the implementation of temperature compensation (abstract)[0010][0018].

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
